

Five Brief Questions on Conditions for Kids

Every candidate running for the state legislature has priorities and plans for kids and education. Please take a few moments to share yours. Below is a brief survey with five short questions. We will post your answers verbatim on our website and publicize them to voters who focus on kids.

Children's Action Alliance (CAA) is proud to provide non-partisan information to educate voters about children's health, education, and security and to help them connect with the candidates who share their priorities. As an independent voice for Arizona children at the state capitol and in the community, CAA does not support or oppose candidates for public office.

Please complete and submit this survey to us by **Monday, July 11**. All completed questionnaires will be posted on our popular CAA website (www.azchildren.org); candidates who do not respond will also be noted.

We invite you to visit our website any time for more statistics about Arizona children and more information on a wide variety of children's issues. We hope these resources help you to develop your policy priorities.

Thank you for your interest in serving the people of Arizona. If you have any questions about the questionnaire, please contact **Pati Urias** at purias@azchildren.org or (602) 266-0707 ext. 209.

of Personal Income

2. Arizona depends on elected leaders to make smart policy decisions that will create the conditions for individuals, families, and businesses to succeed. During the Great Recession Arizona suffered a high rate of people losing their homes, job losses around the state, and huge drops in state revenue. The major ongoing statewide policy directions have been shrinking state government, cutting spending in public K-12 and higher education, eliminating safety net strategies for struggling families, and phasing in additional permanent tax cuts.

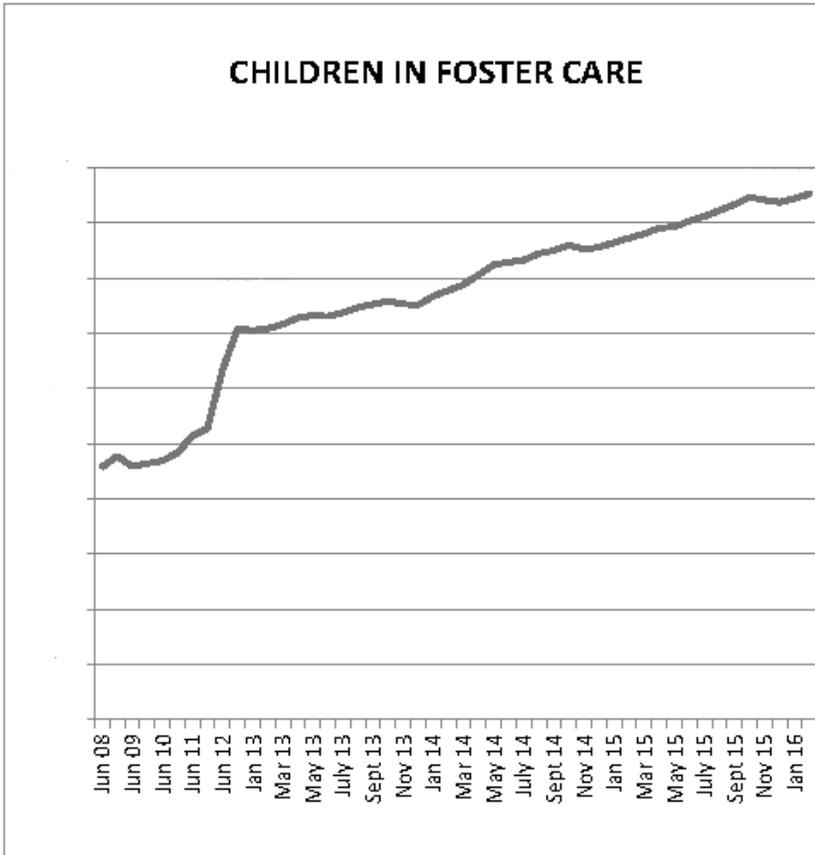

What direction do you support going forward to promote economic health for families and the state?

(Check all that apply)

- Continue to shrink government with additional permanent tax cuts and strive for Arizona to reach the lowest tax rates in the nation.
- Remove requirements on businesses to protect the environment, health, safety, family security, and working conditions.
- Invest in roads, water supply, and other infrastructure.
- Strive for Arizona to build a strong and educated workforce with revenue sources and investments in education and family support.

CHILDREN IN FOSTER CARE

3. Arizona stands out among the states in skyrocketing growth in the number of children living away from their families in temporary foster care due to abuse or neglect. The consequences include huge expense to taxpayers, an overwhelmed and unsustainable child protective services system, a shortage of foster families with children left sleeping in offices and living in shelters, and life-changing trauma for thousands of children.

Do you support more focus on strategies like parent mentoring, child care assistance, family counseling and monitoring, and substance abuse treatment to prevent family crisis and help more children stay safely with their families?

- Yes
- To Some Degree
- No

\$216M**

4. Business CEOs, parents, and teachers across the state are calling for increased investments in public education. The Arizona Joint Legislative Budget Committee (JLBC) data show a 25% drop in total state funding for K-12 education per student – a drop of \$1,200 per student from 2008 to 2016. According to the National Assessment of Educational Progress (NAEP), just over 1 in 3 eighth grade students in Arizona score proficient in math and fewer than 1 in 3 fourth grade students score proficient in reading.

The new withdrawals from the State Land Trust approved by voters for ten years in Proposition 123 settle inflationary funding, but restore less than \$1 for every \$5 of what's been cut from the state budget for schools.

Will you support increased investments in the state budget every year for:

- a) a workforce of qualified teachers with competitive compensation and quality professional development;
- b) classroom curriculum and supplies with updated textbooks and technology; and
- c) school building maintenance and repair to give students safe, clean, and functional places to learn.

Yes

No

5. Reading proficiency by third grade is the most important predictor of high school graduation and career success. In 2016, 6 in 10 Arizona third graders failed the AzMerit reading test. Reading success begins long before third grade. Many children start Kindergarten already behind their peers; poor children have heard 30 million fewer words in their young lives. The high cost of quality child care and preschool education put them out of reach for many hardworking parents (costs of up to \$8,000 per year or more). Often, the children who start out behind stay behind.

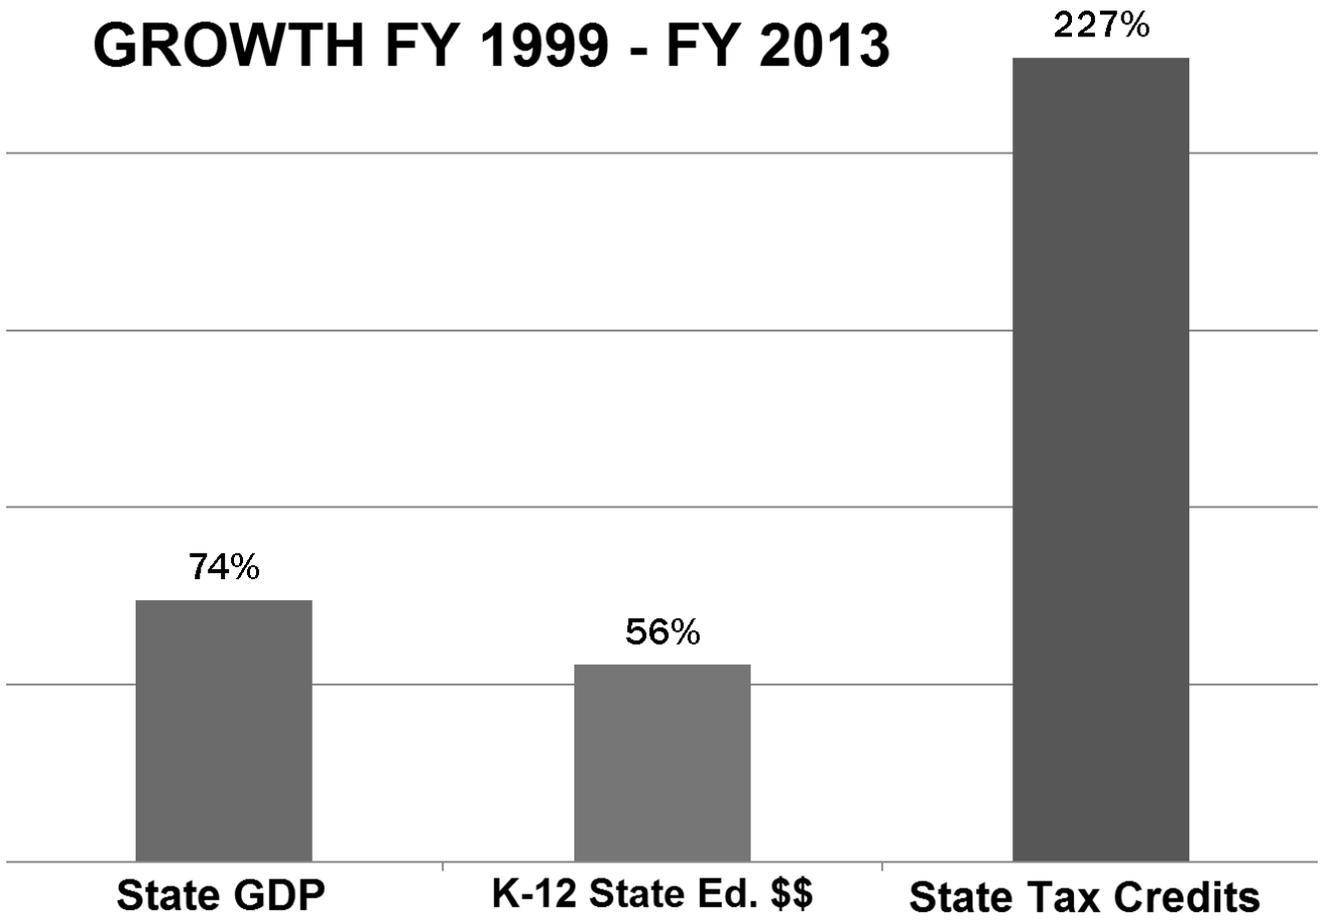

Please indicate the strategies you would support to promote reading success:

(Check all that apply)

- Educational programs to help parents read and sing with their young children and prepare them for kindergarten.
- State funding to help working parents afford quality preschool and child care education.
- Professional reading coaching for child care teachers and elementary school teachers.
- An Early Literacy Grant Program for schools, child care, preschools and community programs to improve reading readiness.

GROWTH FY 1999 - FY 2013

6. Arizona has cut taxes every year (except one) for the past 26 years. Tax cuts passed just since 2009 will remove \$900 million from the state budget every year when they are phased in. Tax credits, like tax cuts, are permanent because they require a 2/3 vote of the legislature plus the signature of the governor to reverse or reduce. Tax credits have been growing far faster than state revenue, the state's economy, or state investments in public education without any evidence that they have created a single job. The amount taken out of state revenues for tax cuts and tax credits is not available to invest in public district and charter schools.

What are your priorities for tax policy?

(Check all that apply)

- Continue to cut taxes every year.
- Cap the growth in tax credits.
- Take a time out from tax cuts to reinvest in public education.
- Adopt tax policies that make the system more fair for low and middle income families.
